

# ROBOTIC precision cleaning

*Dependable, high volume clean parts production using programmable robotic spray cleaning systems.*

## SnoBot™ Custom Workcells

- Cleans and preps complex surfaces with custom processes
- CO<sub>2</sub> composite spray cleaning with continuous liquid purification
- Integrated BlueFire® CO<sub>2</sub> plasma and microblast pre/post-treatments

## CleanFlex™ High Volume System

- Pre-programmed SCARA and articulating robots
- Automatic recipe selection for high-mix part processing
- Multiple spray cleaning channels for faster cleaning

# LIQUID & supercritical CO<sub>2</sub>

*Centrifugal liquid and supercritical CO<sub>2</sub> cleaning and extraction systems using an industry-proven platform.*

## Energia™ Dense Fluid Systems

- Centrifugal shear, top-loading with pre-treatment for heavy duty cleaning
- Bi-directional spray-under-immersion cleaning for complex parts
- Degreasing, deoiling, extraction and outgas substance removal

*Let us precision clean your parts!*

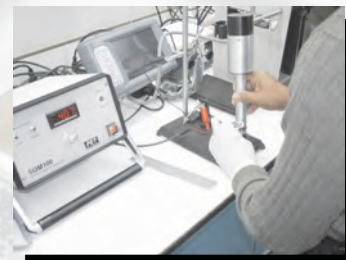

**Our contract cleaning services utilize all of these advanced cleaning products and processes.**

*Clean-Inspect-Package*

**Value-add and equipment rental services too!**

# MODULAR plug 'n spray

*Modular cleaning, analysis and bench-top robot systems for manual, mobile, and automatic cleaning and surface preparation.*

## Blaster™ Industrial Cleaning System

- Large on-board pellet capacity for continuous heavy duty cleaning action
- Adjustable spray pressure and pellet feed for precise cleaning spray control
- Mobile, lightweight cart design for effortless transport within the factory

## SQM™ Surface Quality Monitors

- Quickly monitors surfaces to determine contamination levels
- Measures contamination without touching delicate surfaces
- Integrates easily with robots and CO<sub>2</sub> cleaning systems

**CALL (661) 257-7667**  
*for details*

Our hands-on and creative problem solving approach has resulted in the implementation of effective lean and green (clean) manufacturing solutions for both large and small businesses. Companies have realized financial benefits through improved product quality, greater manufacturing productivity, reduced material requirements, lower energy consumption, and decreased regulatory burdens. Others have developed entirely new clean manufacturing products and services for new markets.

All of these businesses have improved the environmental quality and safety for their employees, customers and communities.
